
a Inputs
b Shared frozen encoder
c Feature spaces
Source crop: tomato (labelled)
Healthy leaves
n ≥ 50
Diseased leaves (one model per class)
early blight
septoria
leaf mold
Gaussian mixture per disease class, shrunk covariance
Target crop: fig (healthy photographs only)
Healthy leaves, no disease labels
n ≥ 50
New field leaf to classify (unlabelled)
disease of this leaf
is not given at any step
DINOv2 ViT-B/14
image cut into patch tokens
× 12
transformer blocks, weights frozen
1,536 feature values per image
LDA projection
16-d, source only
Source: tomato
axis 2: disease spread
axis 1: healthy shift
healthy
early blight
septoria
real DINOv2 features, 16-d projection, 2-D
ellipses: 2σ contours of the class Gauss
Target: fig
axis 2: disease spread
axis 1: healthy shift
healthy (blue: Gaussian)
tomato models pushed through T
new leaves: fig anthracnose, unseen wher
source crop (labelled)
target crop (healthy images only)
transport and decision
pushed source disease model
